

Wireless Radiation and Electromagnetic Sensitivity

I am a very concerned citizen who is absolutely horrified that the FCC is even considering a national wireless broadband plan. It is bad enough that there are already numerous cell phone towers all over the country. The addition of more electromagnetic radiation of the pulsing microwave variety would be devastating to our country. There is ample scientific research, the unbiased research, which proves that this type of radiation is harmful to human health. It damages DNA. If this goes through, there would be even more cancer and other health problems than there are now.

I am already electromagnetically sensitive. I get headaches, nausea, dizziness, and disorientation when exposed to WiFi. There would be no safe place for me to live in this country if this went into effect. Please reconsider the wisdom of inflicting the technology upon the American public. It would be disastrous.

I purchased a house in Plano, Texas, and renovated it to accommodate my health needs. I suffer from Multiple Chemical Sensitivity which is also called Environmental Illness. I have been suffering with it for almost 10 years. I had hoped to recover my health in my new environmentally safe home. Now I can't

live in my home because the city of Plano installed a wireless communications antenna closer to my home. The city refused to turn it off, saying it was "necessary" for the police and fire departments. It is harmful for me. Now I can't live in the home I spent thousands of dollars to renovate. I have limited funds

and can't just go out and buy another house and renovate it. Besides, if the country is wi-fied, there will be NO SAFE PLACE for me to live.

Thank you.
